Composition-based analysis of German three-verb clusters

Sara Grzelak and Mark Hepple

July 9-10, 2024

Outline

- Verb clustering
 - Word order variation in verb clusters
- Complement inheritance
- Main issues in verb clustering accounts
 - Account I: Hinrichs & Nakazawa (1994)
 - Account II: Kathol (2000)
 - Account III: Bouma & van Noord (1996)
- Proposed approach

Verb clustering

Standard German

*... dass er das Examen **bestehen**³ **können**² **wird**¹.*

that he the exam pass be-able-to will

‘... that he will be able to pass the exam.’

Standard Dutch

*... dat hij dat boek **moet**¹ **hebben**² **gevonden**³.*

that he the book must have found

‘... that he must have found the book.’

Word order variation in verb clusters

Standard German

... dass er das Examen **bestehen³** **können²** **wird¹**.

that he the exam pass be-able-to will

Verb order:

3-2-1

Auxiliary flip

... dass er das Examen **wird¹** **bestehen³** **können²**.

that he the exam will pass be-able-to

1-3-2

Zwischenstellung (Southern German dialect)

... dass er das Examen **bestehen³** **wird¹** **können²**.

that he the exam pass will be-able-to

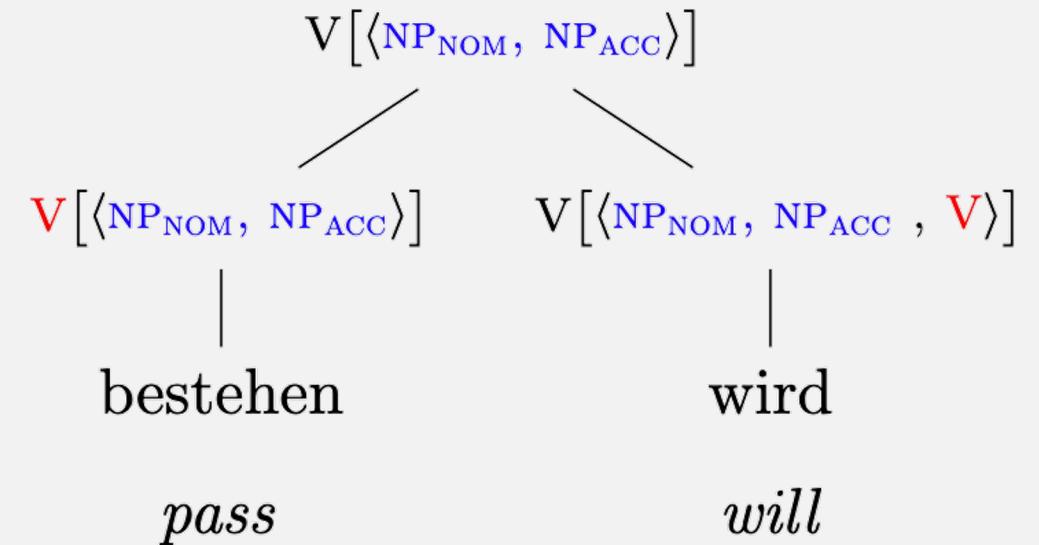

3-1-2

all: ... that he will be able to pass the exam.'

Complement inheritance

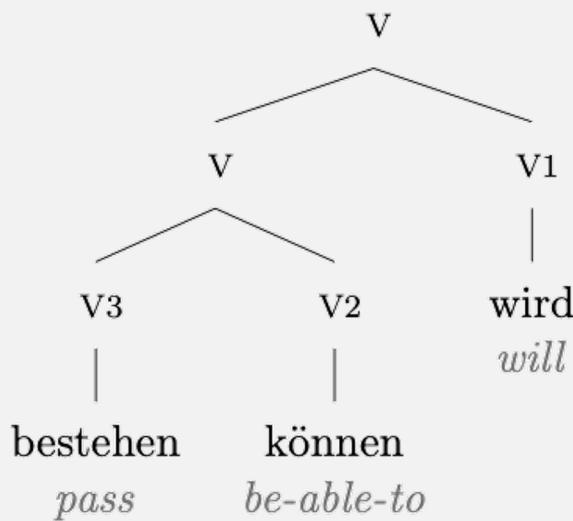

... is a fundamental append operation \oplus
for analyzing verb clusters where $\boxed{1}$ is
used as a shared variable.

$$\text{wird (will)} \mapsto \begin{bmatrix} \text{HEAD} & \text{verb}[fin] \\ \text{SUBCAT } \boxed{1} \oplus \left\langle \begin{bmatrix} \text{HEAD} & \text{verb}[inf] \\ \text{SUBCAT } \boxed{1} \\ \text{NP COMP S } - \end{bmatrix} \right\rangle \end{bmatrix}$$

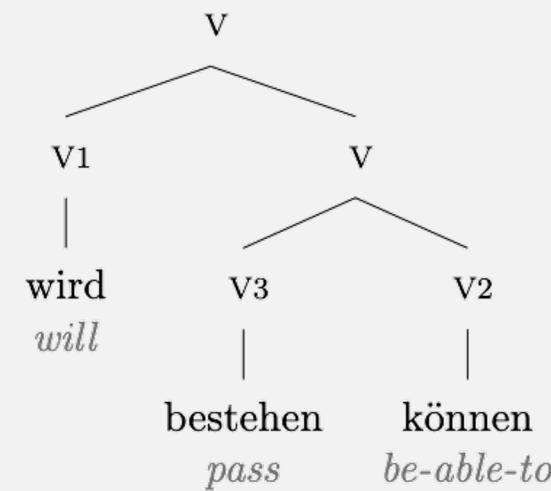

Account I: Bottom-up analysis (Hinrichs & Nakazawa 1994)

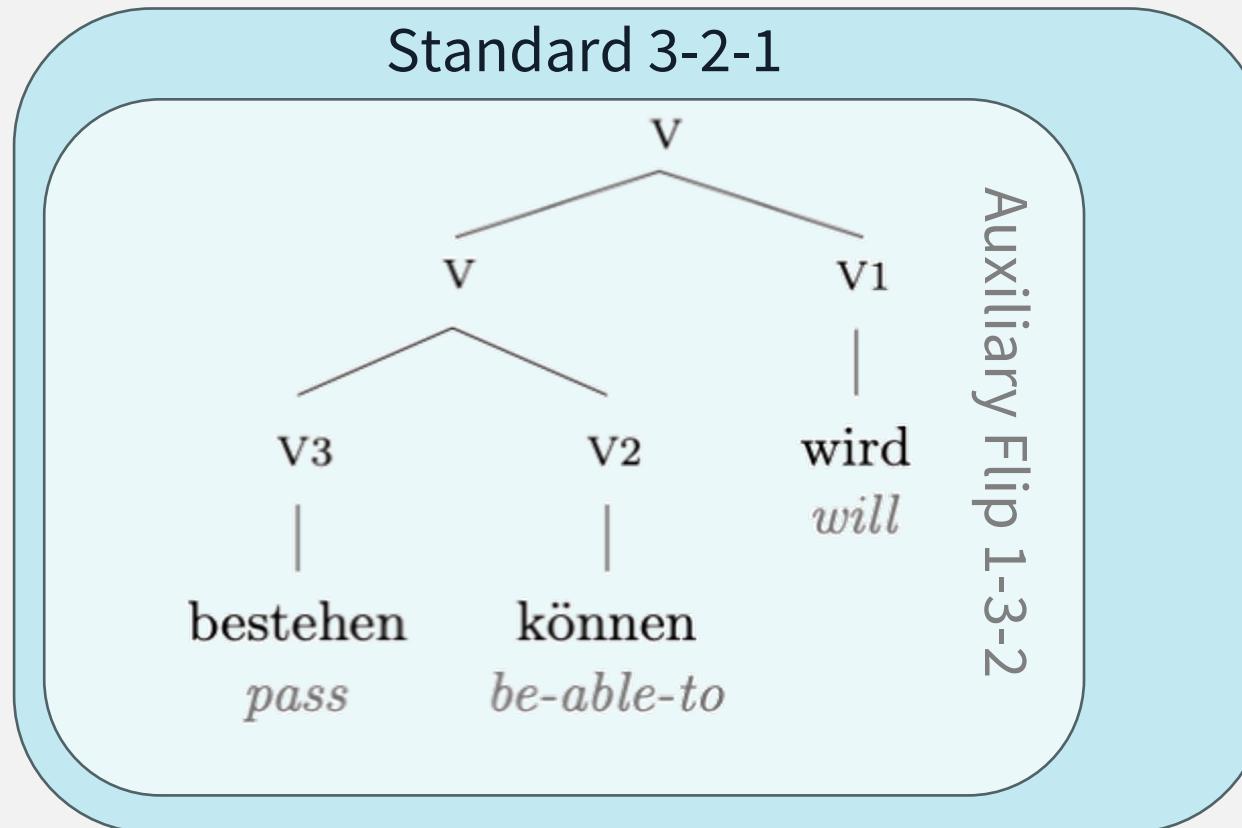

Standard 3-2-1

Auxiliary Flip 1-3-2

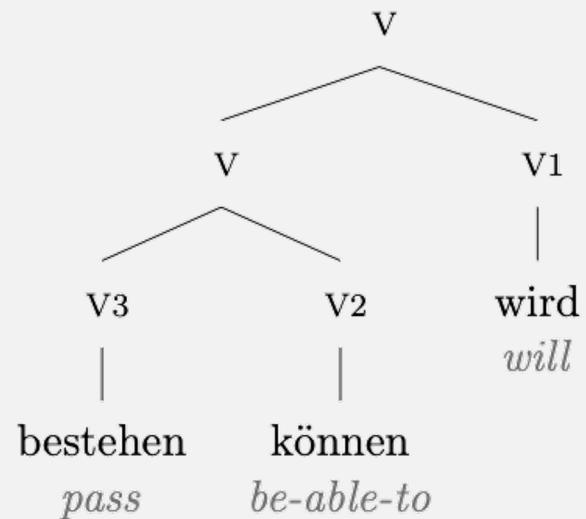

Account I: Bottom-up analysis (Hinrichs & Nakazawa 1994)

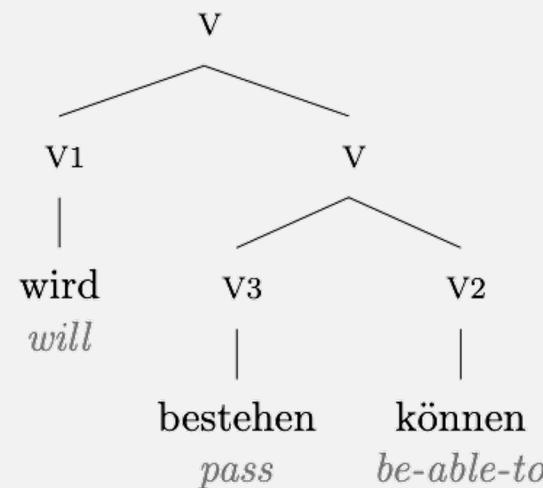

(animated slide)

Account I: Bottom-up analysis (Hinrichs & Nakazawa 1994)

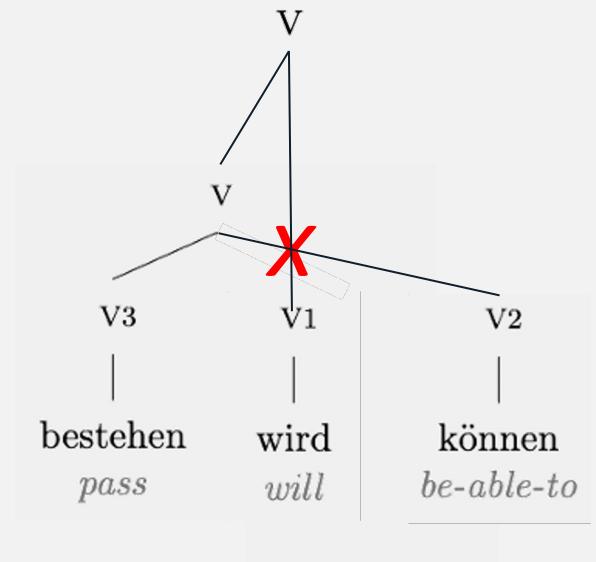

Standard 3-2-1

Auxiliary Flip 1-3-2

Intermediate 3-1-2

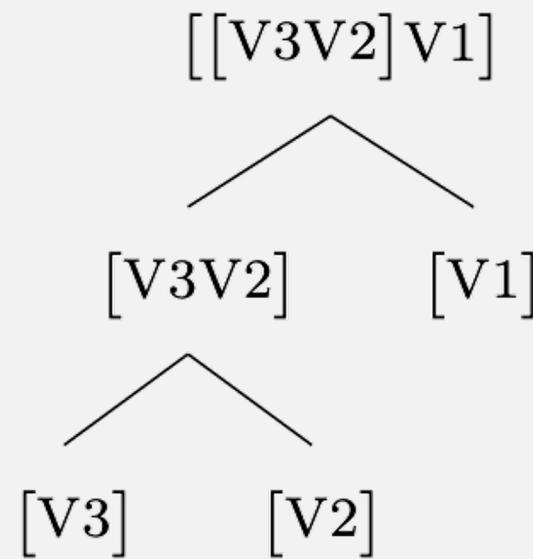

No analysis for the intermediate order

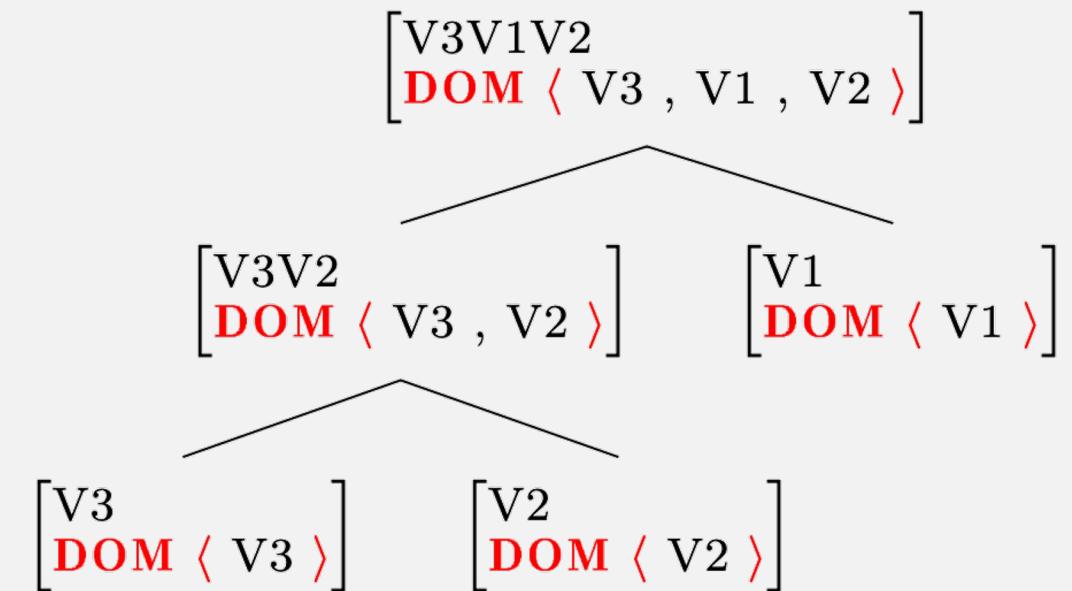

Account II: Linearization-based approach (Kathol 2000)

Introduction of *word order domains* (DOM) from Mike Reape (1993)

Previous analysis:

Kathol's approach:

Account II: Linearization-based approach (Kathol 2000)

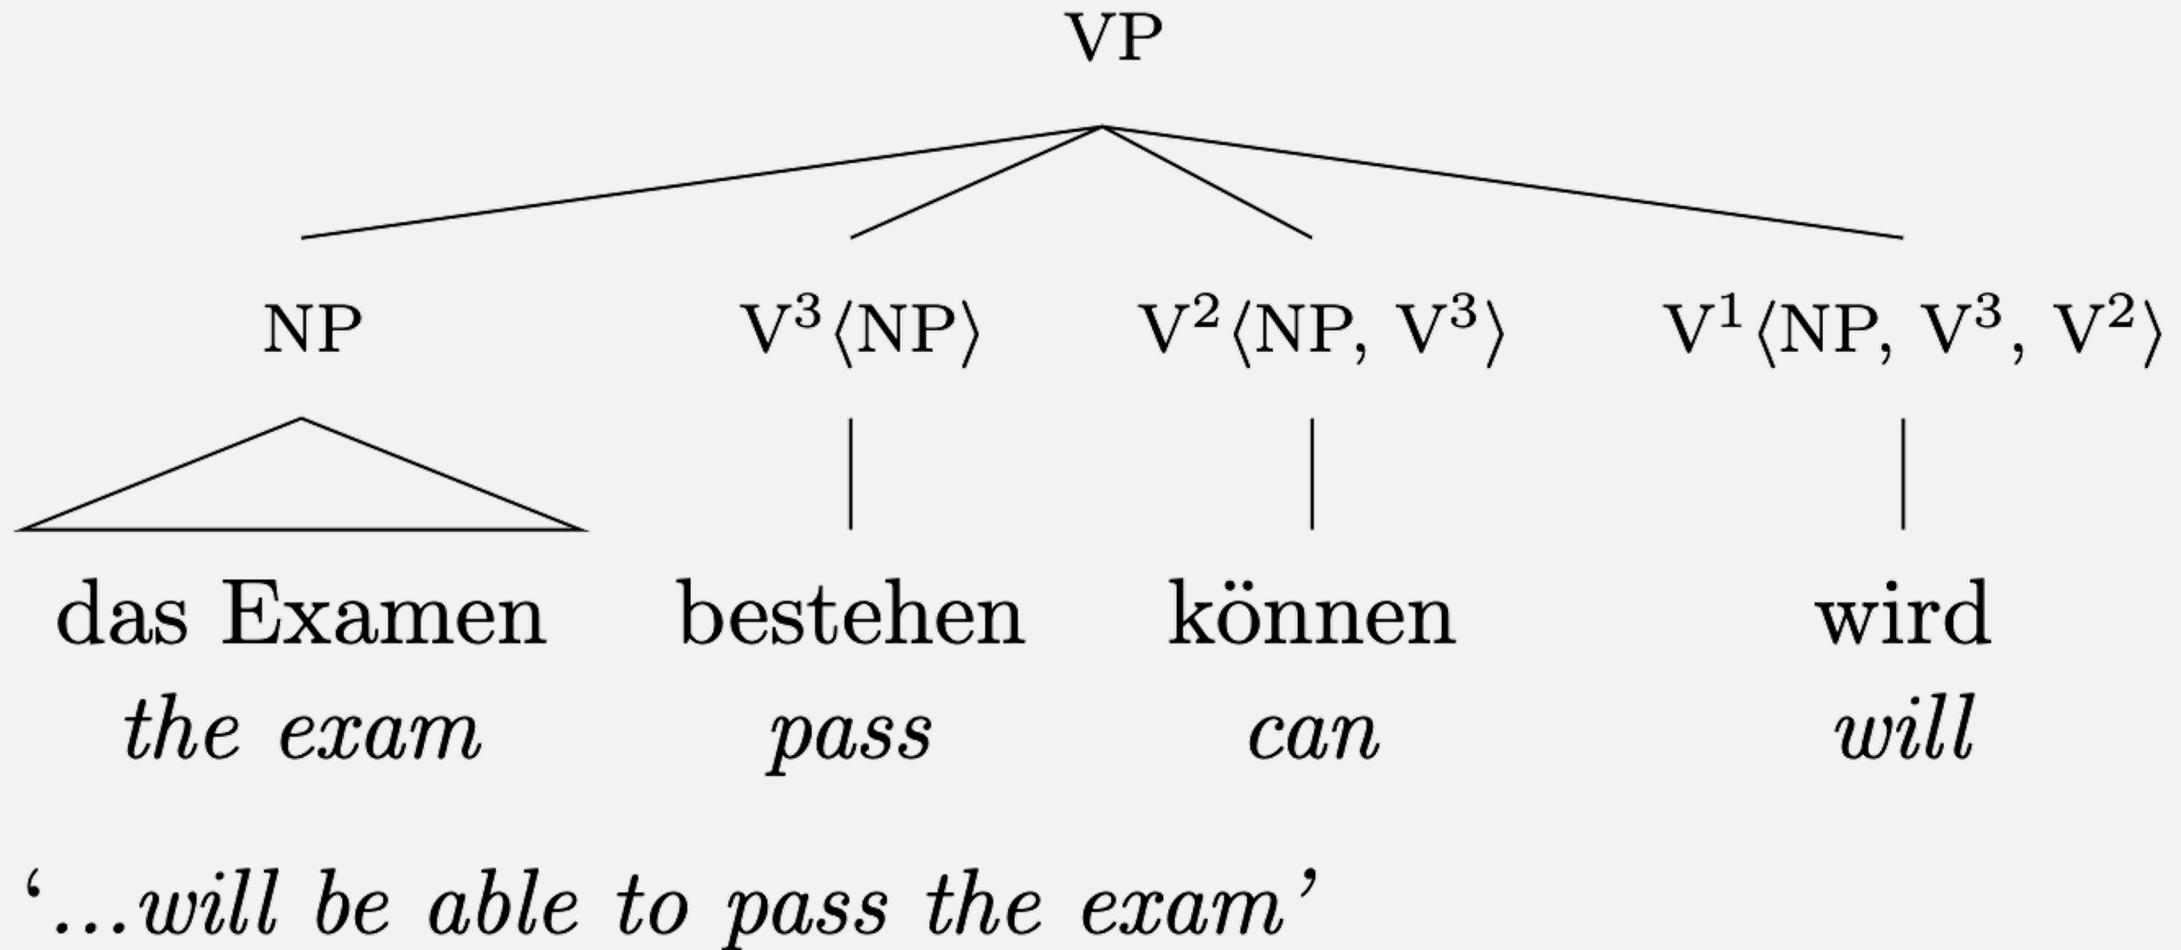

Complicated apparatus

Use of ordering domains (DOM) is a significant augmentation of the HPSG approach

- DOM significantly modifies the relation between how structures are built and the word order that results.

Account III: Alternative flat structure analysis (Bouma & van Noord 1996)

Account III: Alternative flat structure analysis (Bouma & van Noord 1996)

No hierarchical structure

Dubious analysis for linguists (evidence for hierarchical structure)

Proposed analysis

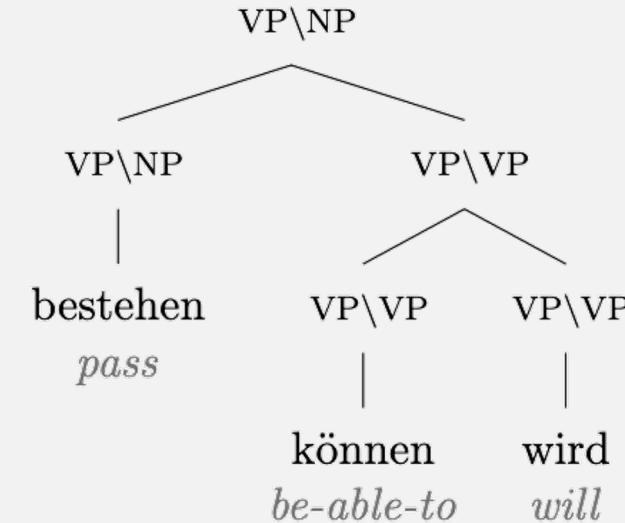

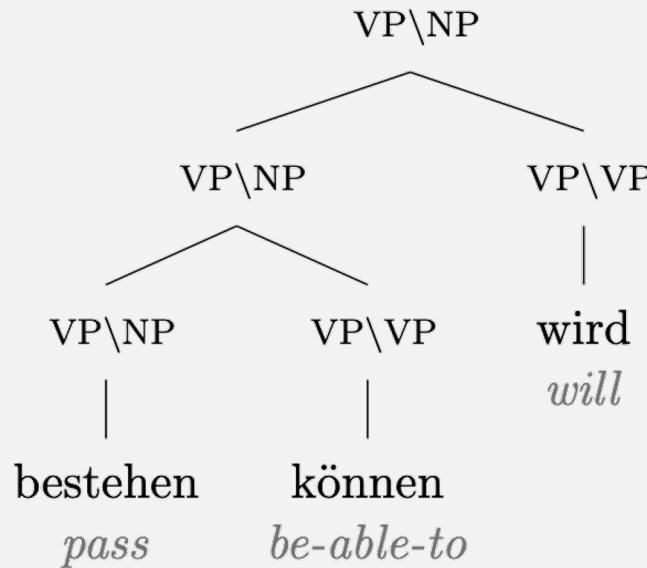

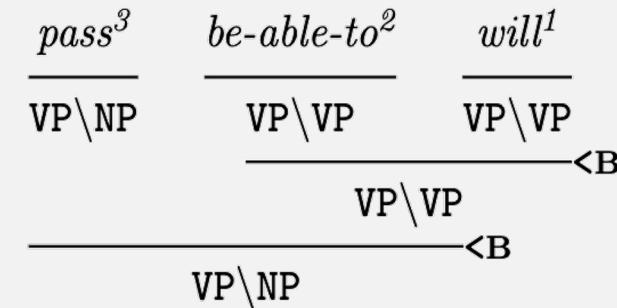

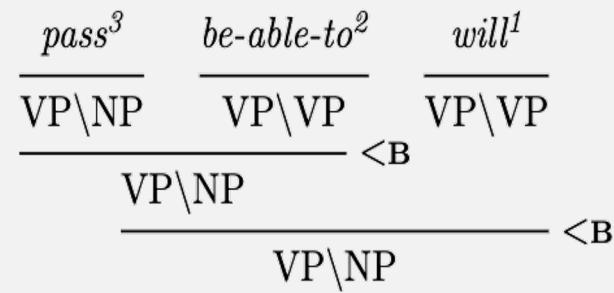

Development of a **simpler yet effective** HPSG-based account of verb clustering

Allowing flexible structure assignment within verb cluster

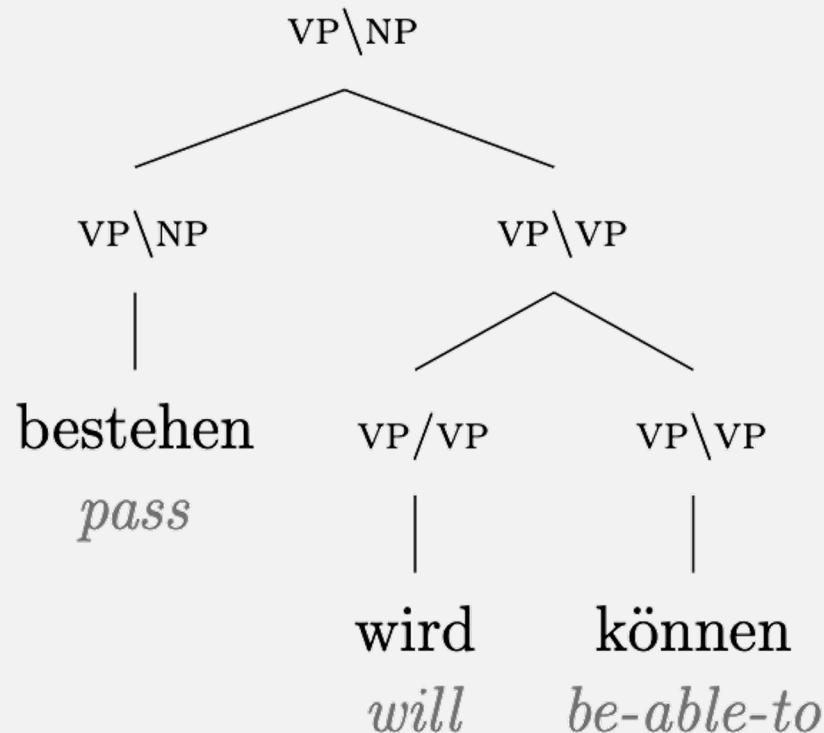

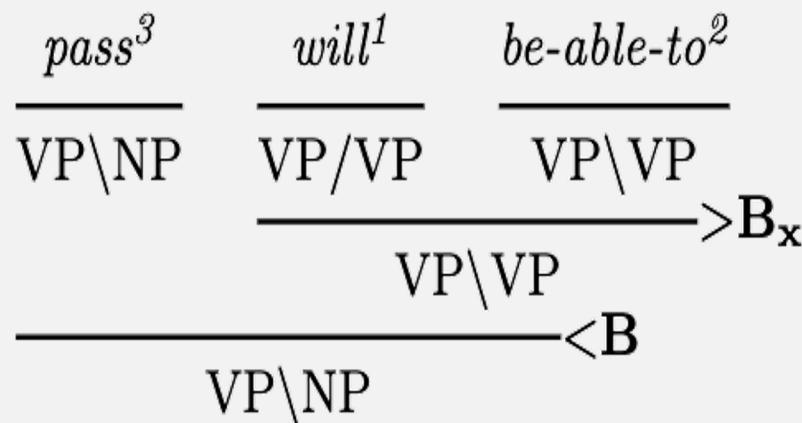

Flexible combination in Flexible Categorial Grammar (FCG)

Flexible combination in Flexible Categorial Grammar (FCG)

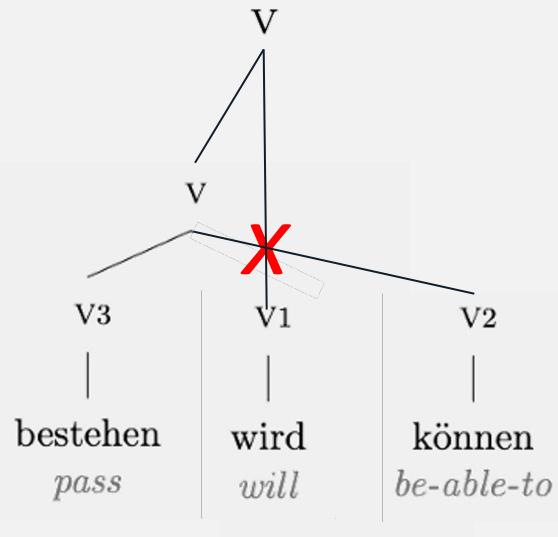

*... dass er das Examen **bestehen**³ **wird**¹ **können**².*

that he the exam pass be-able-to will
'... that he will be able to pass the exam.'

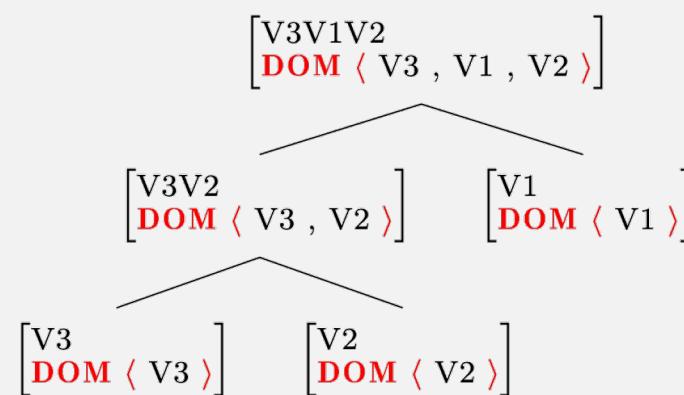

Analysis of intermediate verb order in HPSG vs FCG

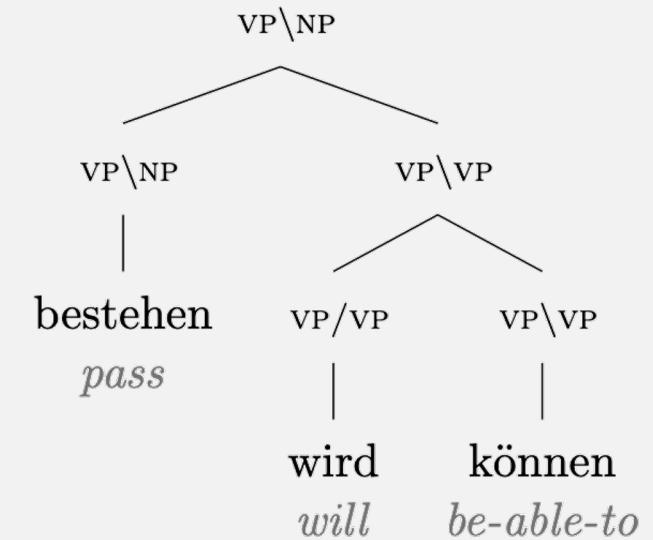

HPSG (H&N 1994)

HPSG (Kathol 2000)

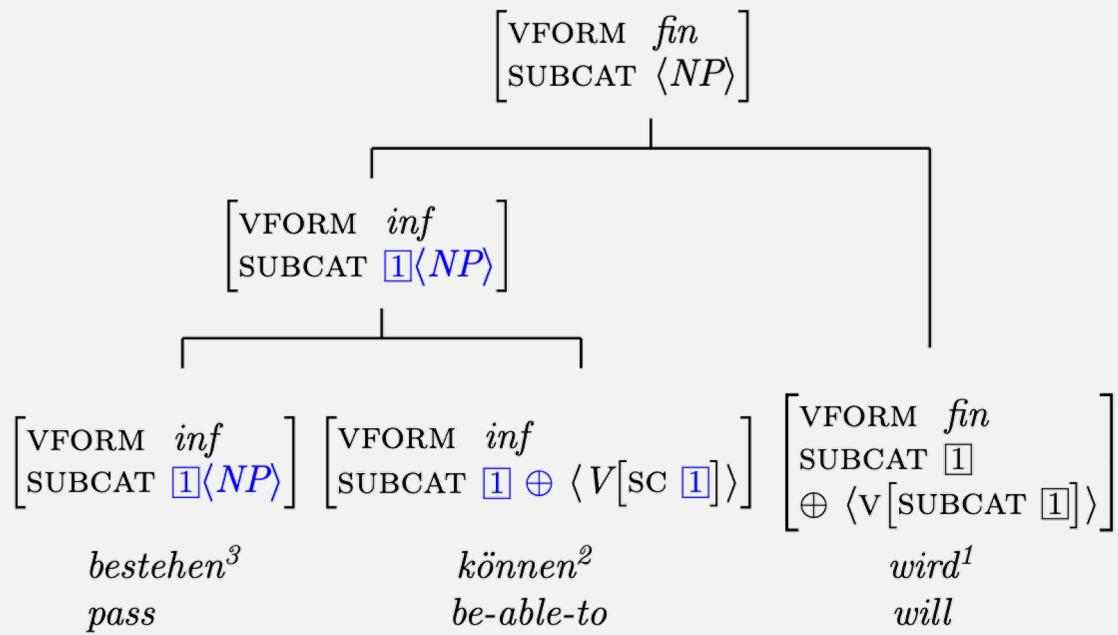

FCG

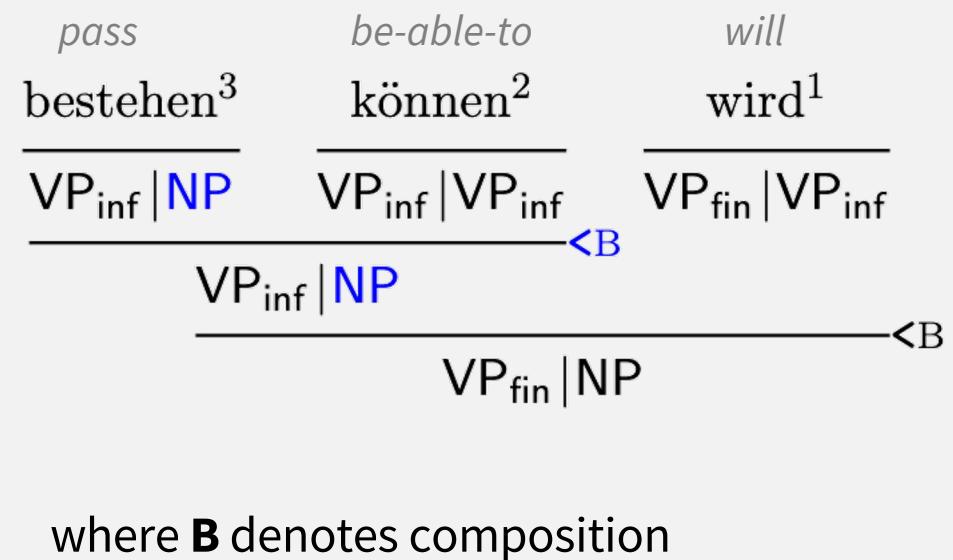

Composition

Complement inheritance (HPSG)

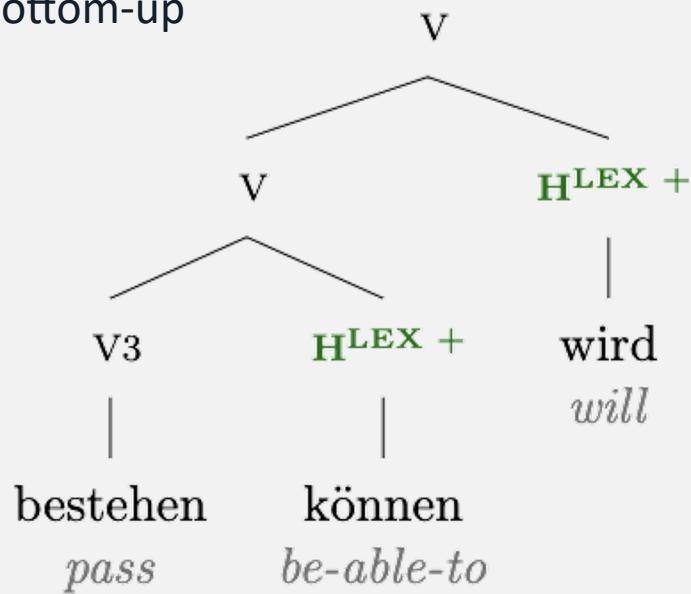

Function composition (FCG)

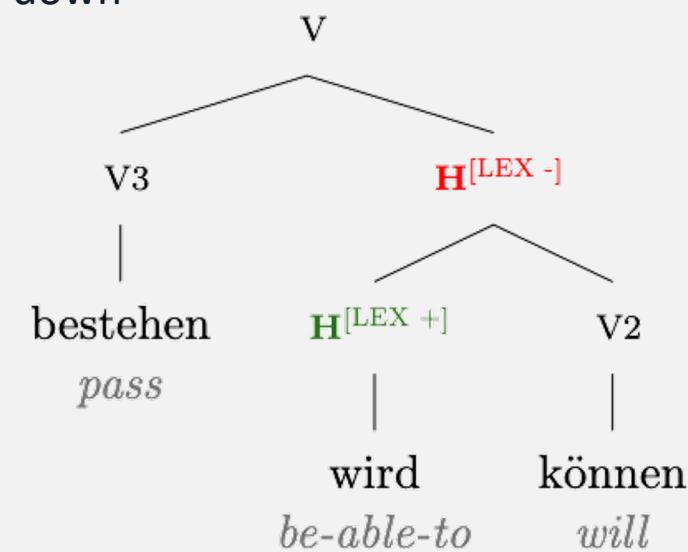

Lexical constraint blocks flexible structure assignment

$V [NP\text{COMP} \ -] \rightarrow H [\text{LEX } +], V$

Bottom-up

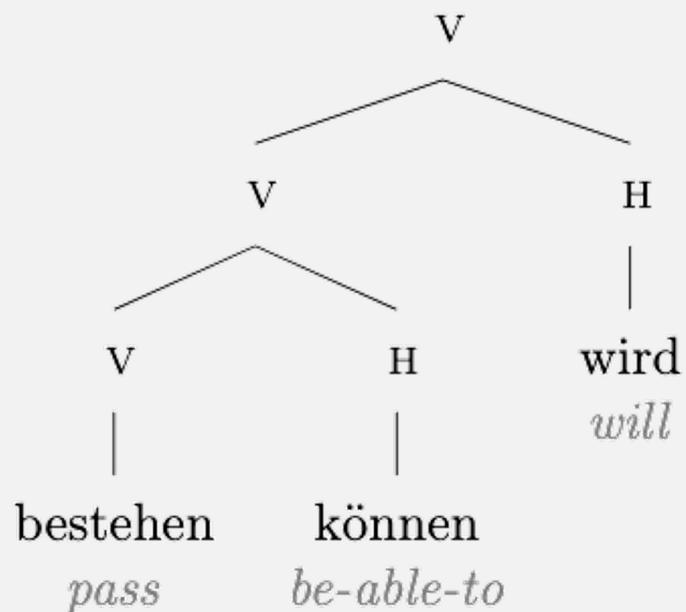

Top-down

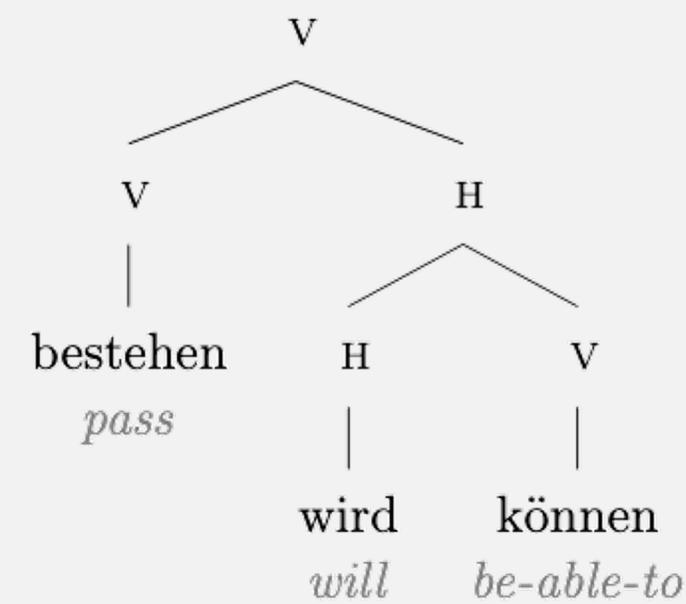

Lexical constraint blocks flexible structure assignment

$V [NP\text{COMP} \ -] \rightarrow H, V$

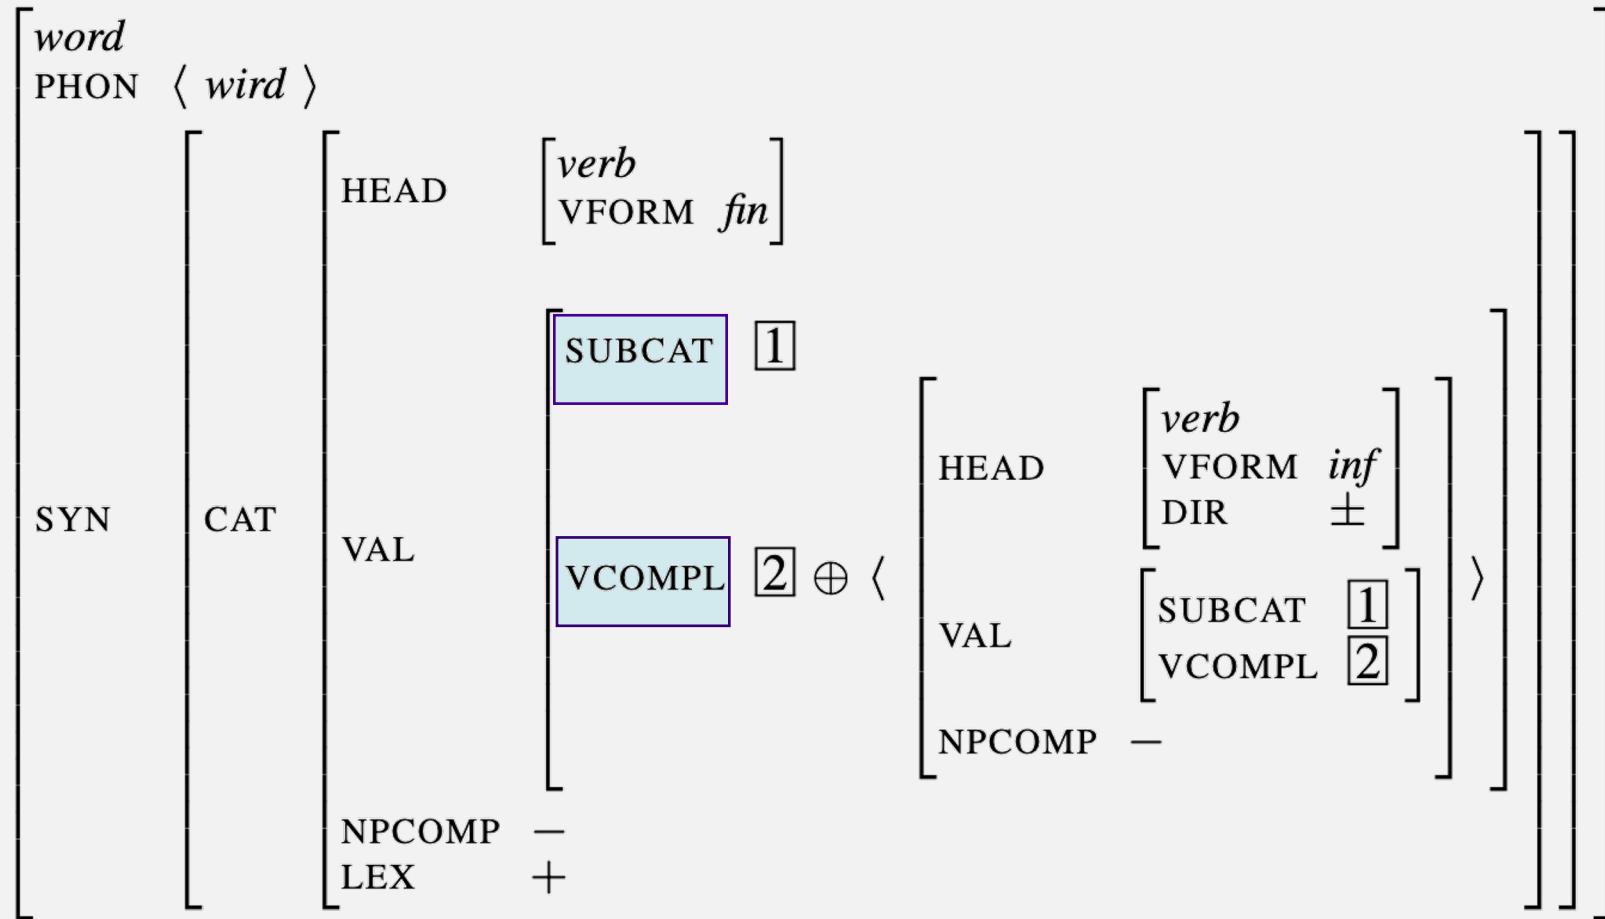

Bottom-up

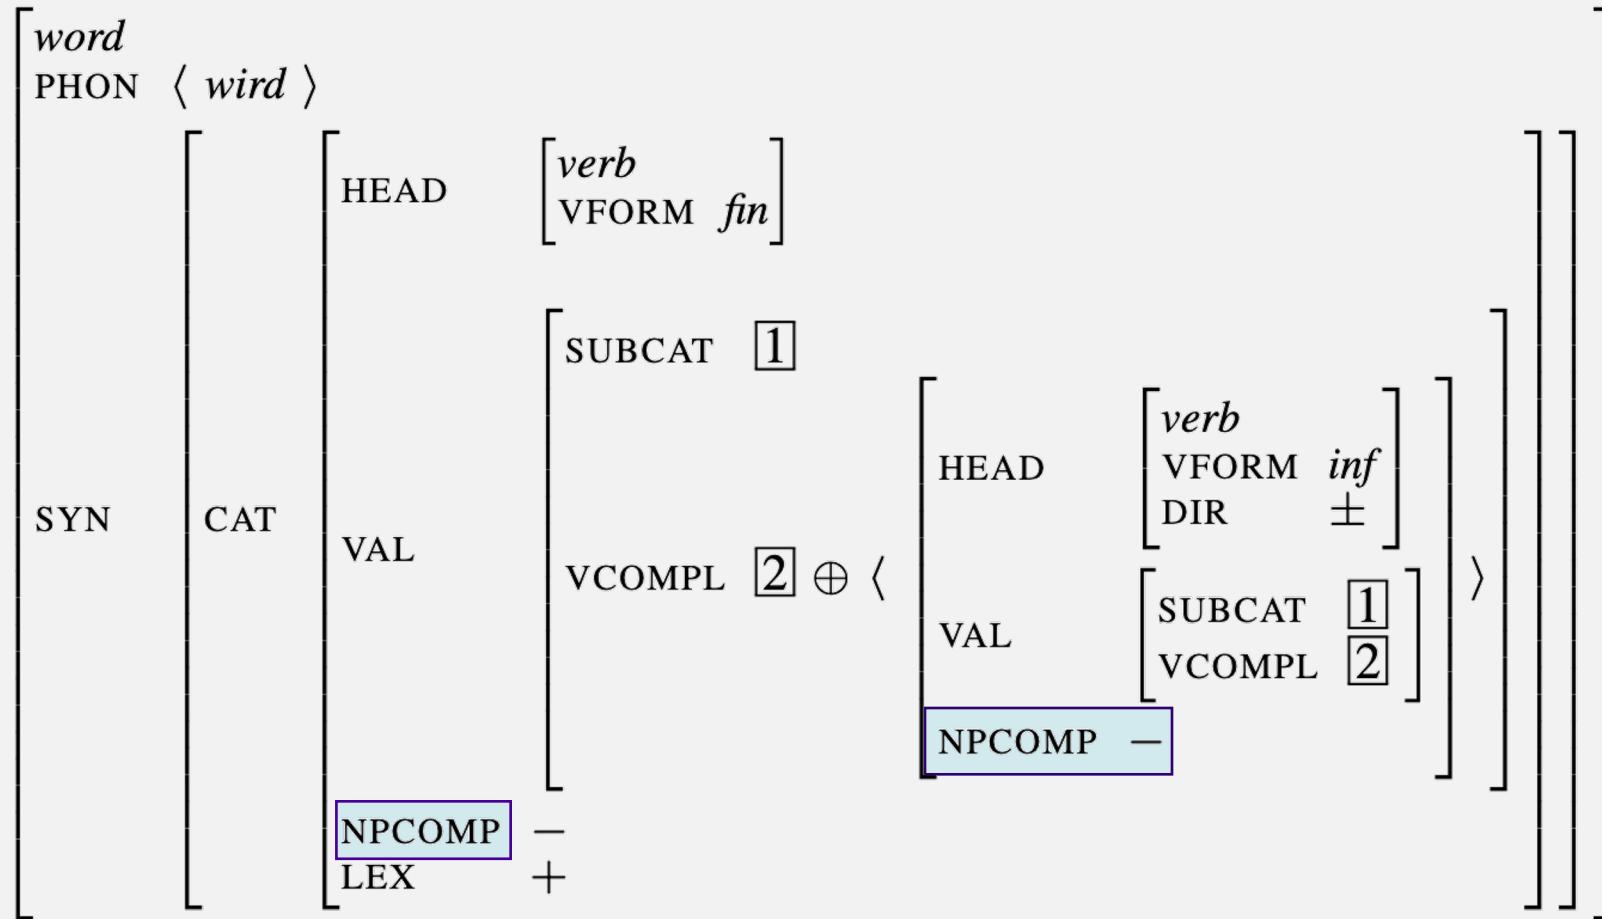

Top-down

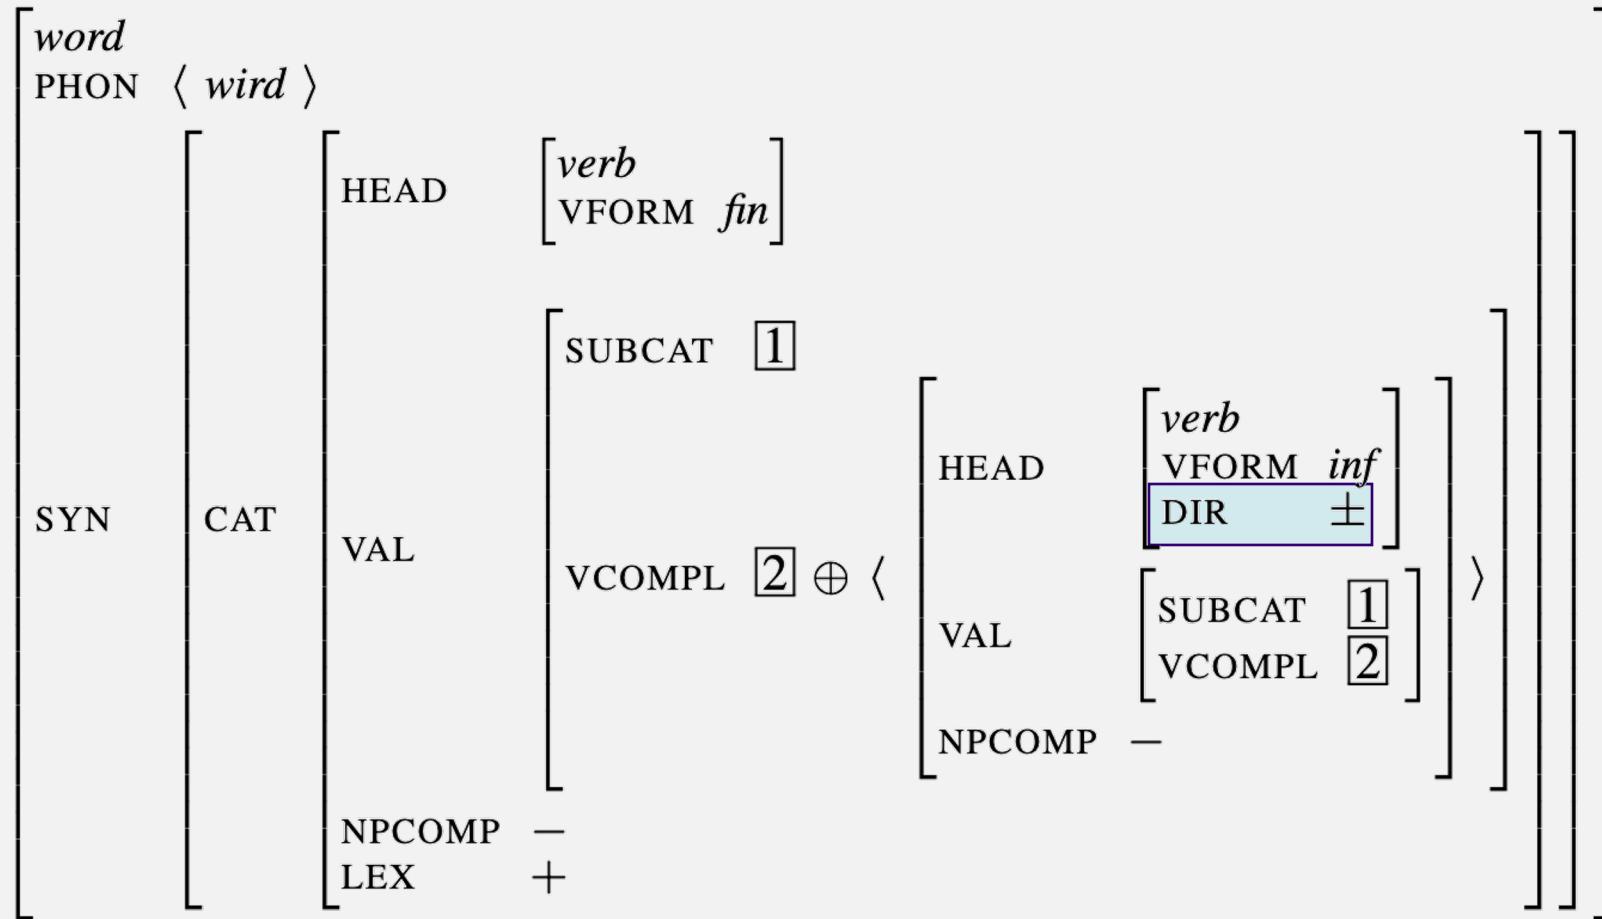

Feature geometry

Feature geometry

Feature geometry

Directionality

PHON	$\langle \text{bestehen} \rangle$
HEAD	$\begin{bmatrix} \text{verb} \\ \text{VFORM } \textit{inf} \\ \text{DIR } \textcolor{purple}{\boxed{\text{L}}} \end{bmatrix}$
VAL	$\begin{bmatrix} \text{SUBCAT } \langle \textit{NP}_{nom}, \textit{NP}_{acc} \rangle \\ \text{VCOMPL } \langle \rangle \end{bmatrix}$
NPCOMP	—
LEX	+

... dass er das Examen **bestehen**[DIR L] wird.
that he the exam pass will
'... that he will pass the exam.'

Ordering constraints

- a. $\text{HEAD} < \text{COMP} \begin{bmatrix} \textit{verb} \\ \text{DIR} & \text{R} \end{bmatrix}$
- b. $\text{COMP} \begin{bmatrix} \textit{verb} \\ \text{DIR} & \text{L} \end{bmatrix} < \text{HEAD}$

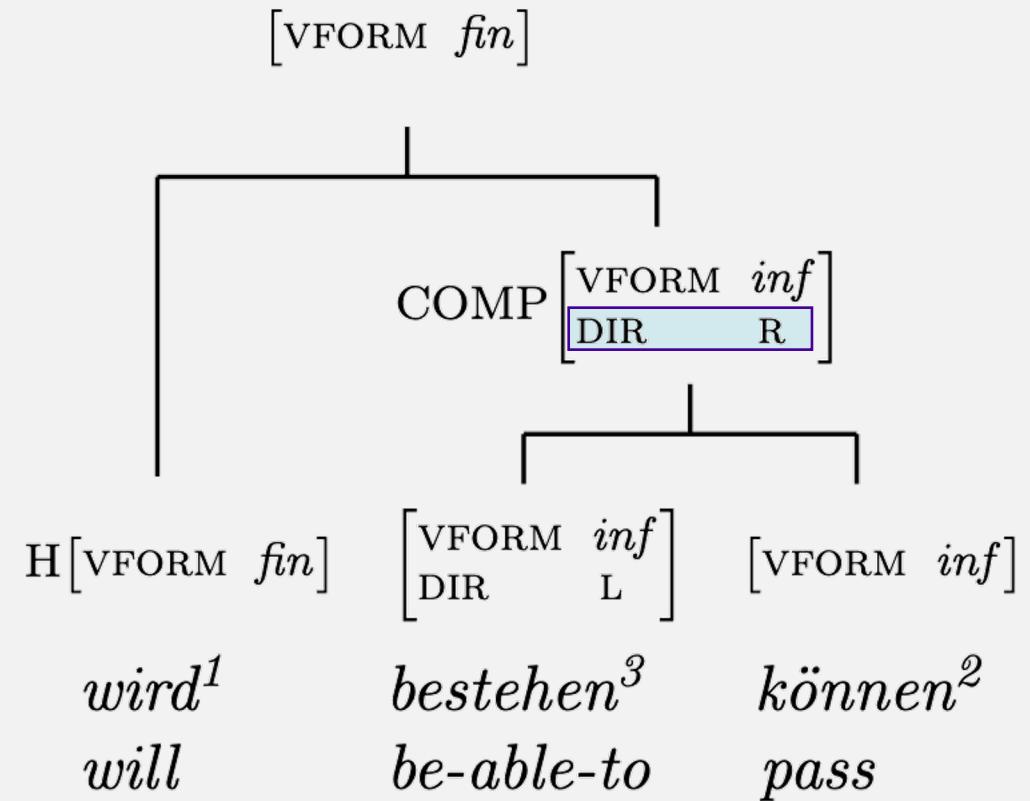

Ordering constraints arise from various sources:

- A verb's lexical entry may specify its DIR value (as in previous slide).
- A verb seeking a verbal complement may define its DIR value.
- If neither of these sources specifies the DIR value, an LP rule will establish it during analysis.

Ordering constraints

Lexicon:

PHON	$\langle können \rangle$
HEAD	$\begin{bmatrix} verb \\ VFORM inf \\ DIR ± \end{bmatrix}$
SUBCAT	1
VCOMPL	$2 \oplus \langle \begin{bmatrix} HEAD [VFORM inf] \\ SUBCAT 1 \\ VCOMPL 2 \\ NPCOMP - \end{bmatrix} \rangle$
NPCOMP	-
LEX	+

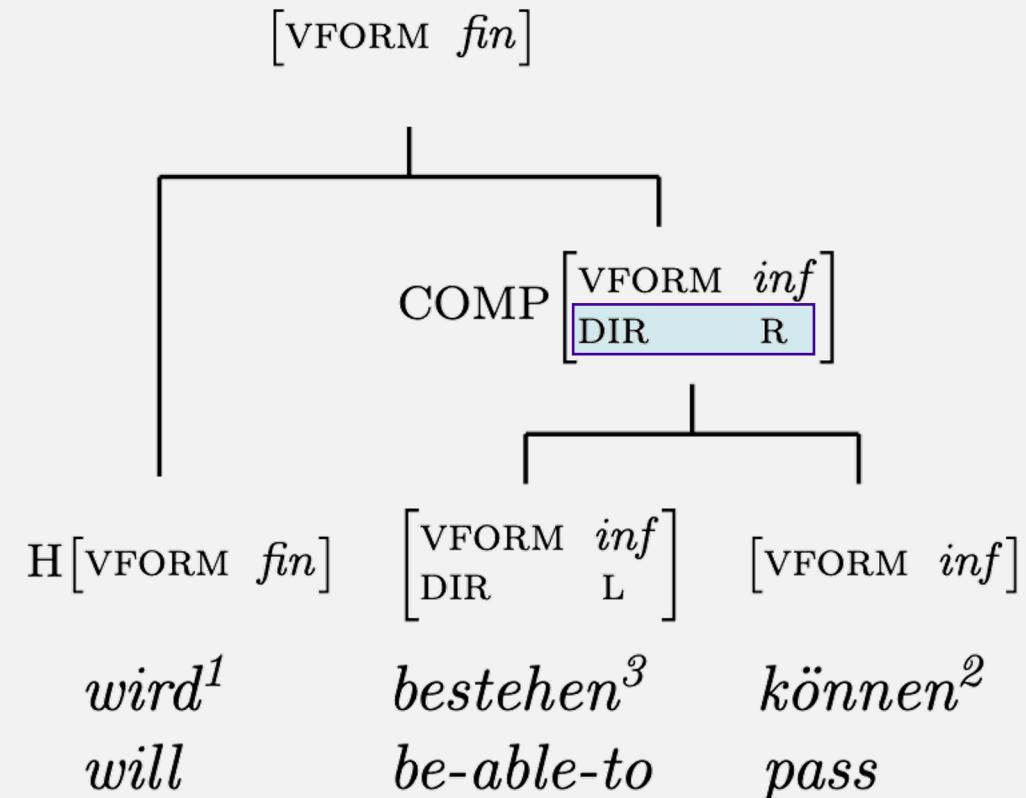

Ordering constraints

LP rules:

a. $\text{HEAD} < \text{COMP} \left[\begin{matrix} \textit{verb} \\ \text{DIR} \quad \text{R} \end{matrix} \right]$

b. $\text{COMP} \left[\begin{matrix} \textit{verb} \\ \text{DIR} \quad \text{L} \end{matrix} \right] < \text{HEAD}$

Zwischenstellung

$V[NPCOMP -] \rightarrow H, V$

$\begin{bmatrix} \text{SUBCAT } \boxed{3}\langle NP, NP \rangle \\ \text{VCOMPL } \boxed{4}\langle \rangle \\ \text{NPCOMP } - \end{bmatrix}$

$\begin{bmatrix} \text{DIR } R \\ \text{SUBCAT } \boxed{3} \\ \text{VCOMPL } \boxed{4} \oplus \langle \boxed{2} \rangle \end{bmatrix}$

$\boxed{2} \begin{bmatrix} \text{DIR } L \\ \text{SUBCAT } \boxed{3}\langle NP, NP \rangle \\ \text{VCOMPL } \boxed{4}\langle \rangle \\ \text{NPCOMP } - \end{bmatrix}$
*bestehen*³
pass

$\begin{bmatrix} \text{SUBCAT } \boxed{3} \\ \text{VCOMPL } \boxed{4} \oplus \langle \boxed{2} \rangle \oplus \langle \boxed{1} \rangle \end{bmatrix}$

wird^l
will

$\boxed{1} \begin{bmatrix} \text{DIR } R \\ \text{SUBCAT } \boxed{3} \\ \text{VCOMPL } \boxed{4} \oplus \langle \boxed{2} \rangle \end{bmatrix}$
*können*²
be-able-to

Permutations

Possible orders	Analysis	German	Dutch	Afrikaans	...
a) 123	1[23] and [12]3	✗	✓	✓	
b) 132	1[32]	✓	✓	✓	
c) 213	[21]3	✗	✗	✗	
d) 231	[23]1	✗	✓	✓	
e) 312	3[12]	✓	✓	✓	
f) 321	[32]1 and 3[21]	✓	✓	✗	

Source: Wurmbrand, 2017

Bottom-up derivations

Possible orders	Analysis	German	Dutch	Afrikaans	...
a) 123	1[23] and [12]3	X	✓	✓	
b) 132	1[32]	✓	✓	✓	
c) 213	[21]3	X	X	X	
d) 231	[23]1	X	✓	✓	
e) 312	3[12]	✓	✓	✓	
f) 321	[32]1 and 3[21]	✓	✓	X

Dutch three-verb clusters

TYPE OF CLUSTER	WORD ORDER
Modal ₁ Modal ₂ Verb ₃ e.g. <i>moet kunnen werken</i> ‘must can work’	1-2-3 1-3-2 * 2-1-3 * 2-3-1 3-1-2 3-2-1
Modal ₁ Auxiliary ₂ Verb ₃ e.g. <i>moet hebben gemaakt</i> lit. ‘must have made’	1-2-3 1-3-2 * 2-1-3 * 2-3-1 3-1-2 3-2-1
Auxiliary ₁ Aspectual/Modal ₂ Verb ₃ e.g. <i>is gaan zwemmen</i> lit. ‘is go swim’/ <i>heeft kunnen zwemmen</i> lit. ‘has can swim’	1-2-3 1-3-2 * 2-1-3 2-3-1 * 3-1-2 3-2-1

Figure adapted from Augustinus, E. (2015)

Key observations from the SAND study
(Barbiers, S. et al. 2008):

- Five out of six possible verb orders are found in the Dutch language area.
 - The 213 order is excluded in all investigated constructions.
- Verb order depends on construction type and geographical region.

The case for VCOMPL

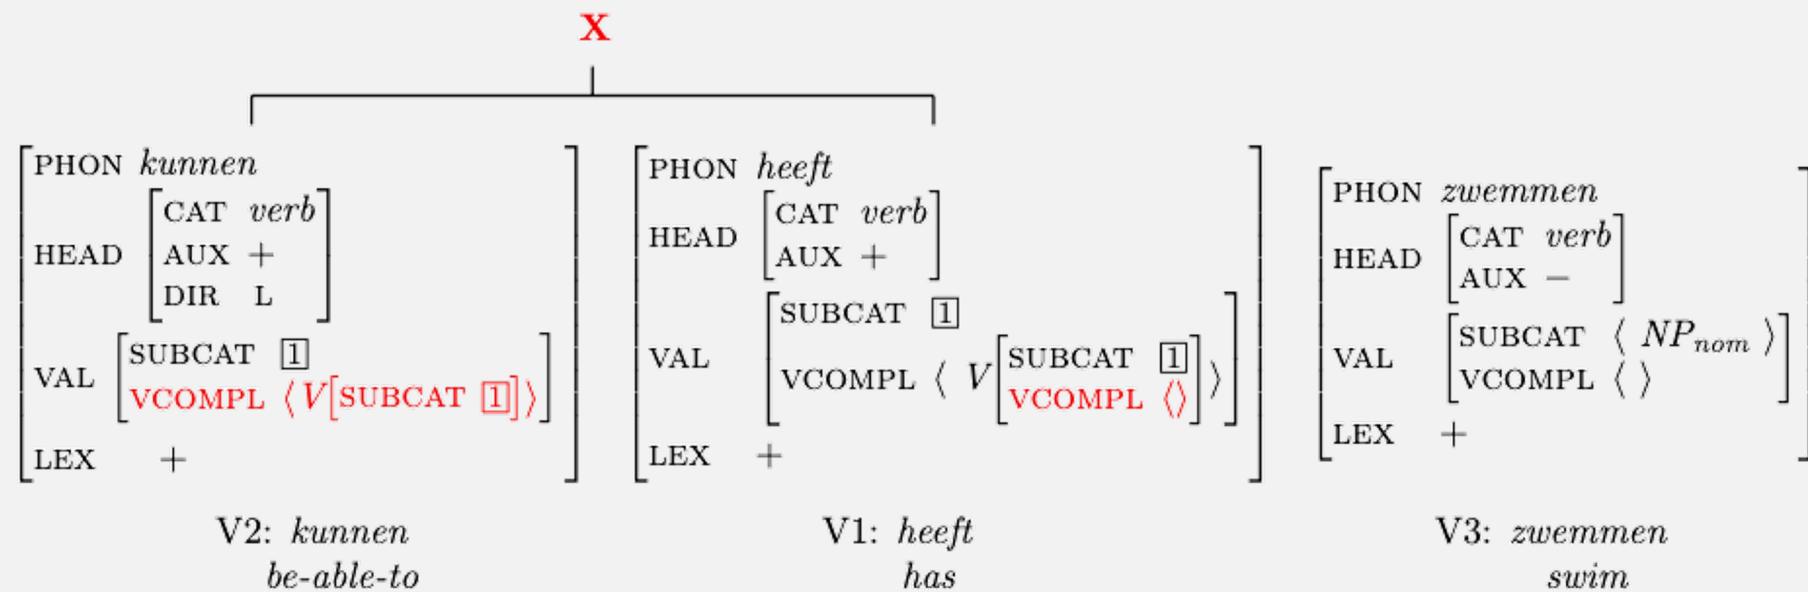

The use of VCOMPL feature allows us to **block flexible combination** by specifying within the finite verb that the VCOMPL list of its complement is empty.

PHON	$\langle \text{heeft} \rangle$
HEAD	$\begin{bmatrix} \text{verb} \\ \text{VFORM } \textit{fin} \end{bmatrix}$
VAL	$\begin{bmatrix} \text{SUBCAT } \boxed{1} \\ \text{VCOMPL } \langle \text{V} \left[\begin{bmatrix} \text{SUBCAT } \boxed{1} \\ \text{VCOMPL } \langle \rangle \end{bmatrix} \right] \rangle \end{bmatrix}$
NPCOMP	—
LEX	+

The case for VCOMPL

*Ik weet dat hij kunnen² heeft¹ zwemmen³.

I know that he be-able-to has swim

Summary and Conclusion

Key points

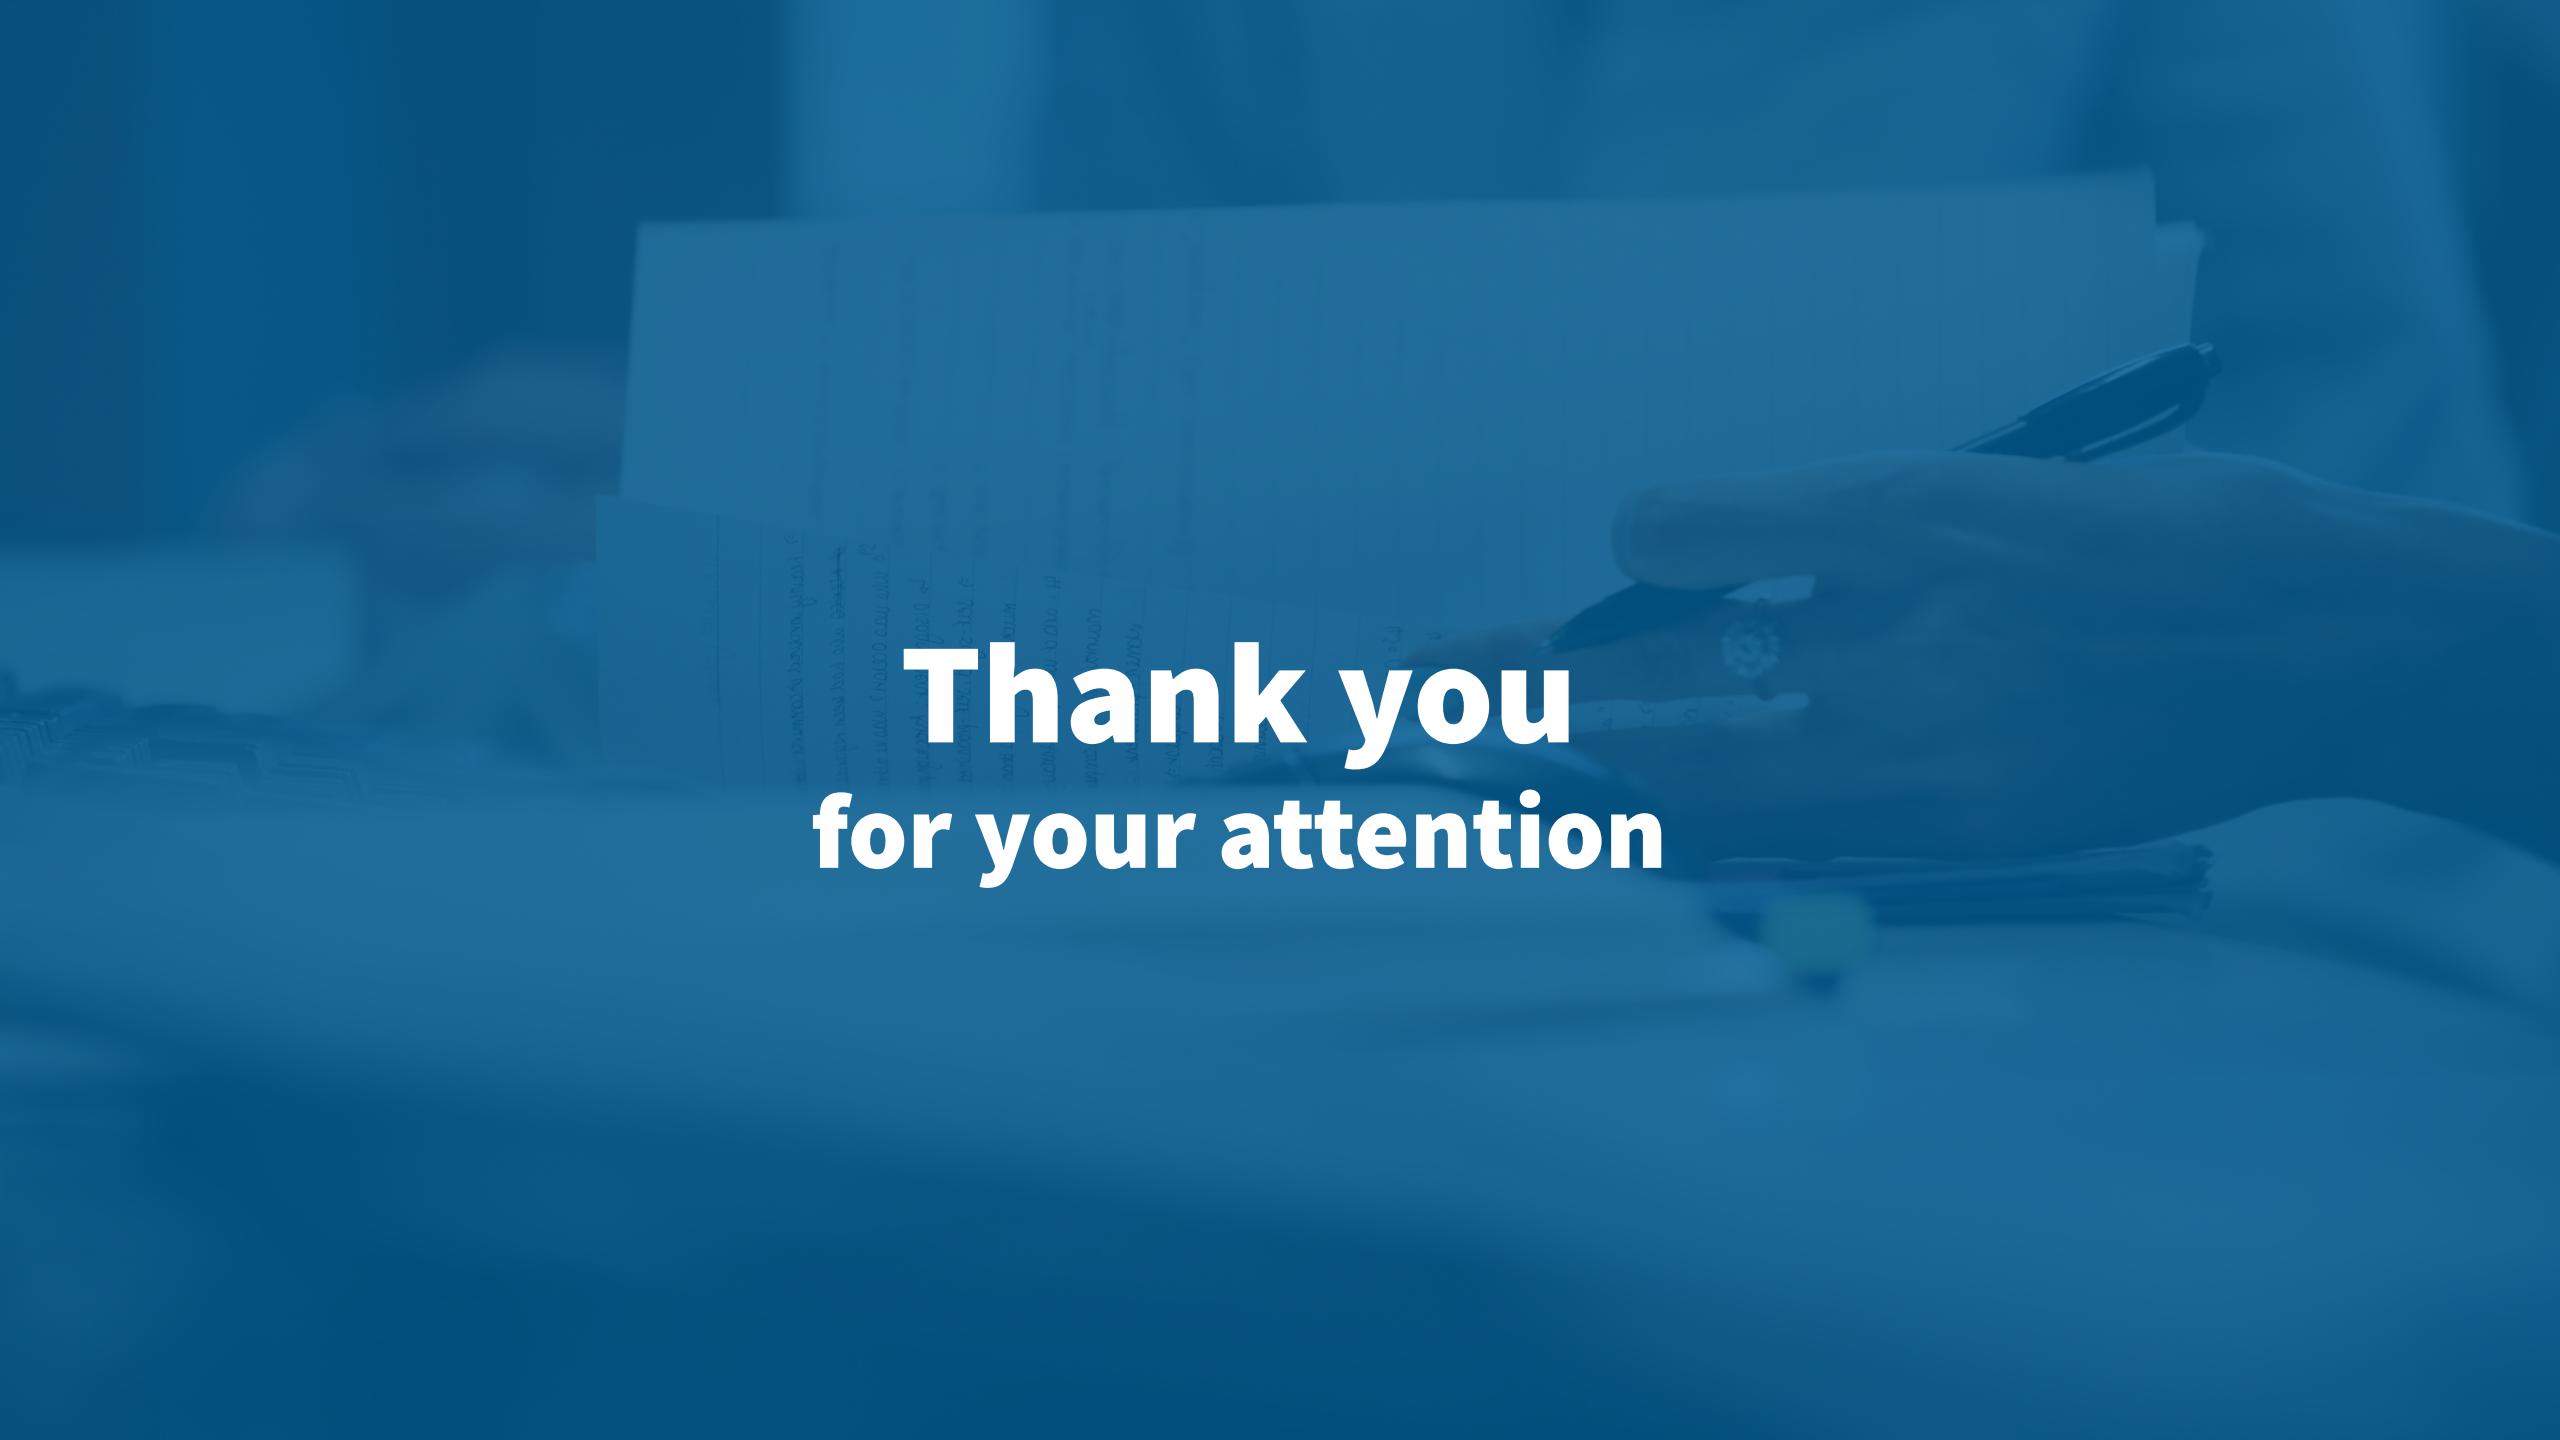

- Flexible combination within verb clusters allows derivation of broadly attested verb orders in German.
- This approach addresses challenges faced by standard constituency without the need for additional ordering domains.

Implications

- Provides a less complex analysis of verb cluster.
- Simplifies the process by avoiding additional mechanisms.

Next steps

- Further research to test this approach with more linguistic data.
- Potential refinement of the framework to address any uncovered limitations.

A photograph of a person's hand resting on a light-colored wooden desk. The hand is holding a dark blue or black fountain pen. Below the hand is an open notebook with white pages and blue horizontal lines. A small, silver-colored electronic calculator is placed next to the notebook. The background is slightly blurred, showing more of the desk and some office supplies.
